

RockCraft *Designs*

A real climbing experience. Created by real climbers.

Bouldering, Parks & Play - A Natural Combination

Rock bouldering is an ideal addition to any playground, combining challenge with adventure.

Educators agree it develops:

Improved coordination, agility and balance

Broad muscle development through the use of both gross & fine motor skills

Mental focus through exploring various routes of difficulty

Social and cooperative play

RockCraft Designs Advantages

Safety: Signature “V” Design

Our unique “V” design ensures that all landings are unimpeded, as in the event of a fall, climbers will land away from the structure on the absorbent safety surfacing. The boulders are also hand stoned to ensure they are smooth and contain no snags for fingers, feet or clothing.

Climbability: Widest Variety and Number of Holds

Our unique hand crafted construction allows us to offer a full range of self-draining holds including jugs, crimps, pinches, under-clings, sloppers, side-pulls, ledges, and flakes. Our holds are of various sizes to accommodate both novice and skilled climbers. With hundreds of holds per piece, climbers are able to fully circumnavigate the boulder and experience new challenges on every climb.

Aesthetics: The most natural rock

Our boulders are available in west coast granite, selkirk quartzite, or desert sandstone. A clear coat sealer protects them from the elements and allows graffiti to be easily removed.

Shipping, Installation and Durability

The boulders are shipped as one piece and can be easily lifted with the built in lifting eye or the forklift channels built into our larger boulders. Our 6500 psi concrete mix results in superior strength and durability, allowing us to offer our industry leading **15 year warranty**.

*ASTM,
CPSC,
and
CSA
compliant.*

Selecting Your Boulders

RockCraft Designs offers the widest range of boulders in the industry.

Consider the following three aspects when selecting the boulders that are perfect for your project:

- 1: Age range of climbers
- 2: Number of climbers at one time
- 3: Available play space for the boulders

The Chief (C-232), climb ht 10'

Selkirk (SK-001), climb ht 9'

Eiger (E-212), climb ht 9'

Cerro Torre (CT-341), climb ht 8'

As described by our customers:

"RockCraft boulders are in a class on their own for play value and climbing experience"

Fitz Roy II (FT-341), climb ht 8'

Cheops (CHP-187), climb ht 8'

Lizard (LZ-543), climb ht 7'
